

Tougher & Longer Lasting Than Silicone Coated Films!

CELEBRATING 50 YEARS OF INNOVATIVE HISTORY IN THE PRINTING INDUSTRY

Engineered with exact tolerances, the microscopic glass beads in SUPER SEE anti-marking films are designed specifically to reduce surface area contact with the freshly printed substrate.

The uniform surface of SUPER SEE anti-marking film provides even support across the entire substrate. The film is remarkably flexible and will maintain bead adhesion even under the most intense conditions and our proprietary coating is tougher & longer lasting than silicone coated anti-marking films.

- Available in Cut Sheets and Converted Jackets
- Option of Small and Large Bead
- Custom cut sheets can be clamp or tape mounted
- Heidelberg Approved Hardware on Converted Jackets
- Bead consistency allows for longer runs and less washing
